- Engineering Academy
- Applied Mathematics and Computer Science
- Data Science and Digital Transformation

09/2018 – 07/2022
Moscow, Russia

Licence's degree, Moscow Power Engineering Institute University ☑

- Engineering Economic Faculty
- Information Security Program
- Computer Systems Security Specialization

📖 COURSES

08/2023 – present
Moscow, Russia

School 21, Core Program ☑

- Language C
- Structured Programming
- Algorithms and data structures
- Shell/Bash
- Linux
- Leadership
- TeamWork (Peer to Peer System)

11/2021 – present
Moscow, Russia

Profession C# developer Skillbox, Skillbox Platform ☑

- Profession C# developer to PRO
- Web Layout. Basic level
- Web Layout. Advanced level
- Git Version Control System
- SQL Query Language

PROJECTS

12/2021 – present

Personal student's site, Games

It features several games, including Principal Puzzle, Guess Guess Game, Multiplayer, and Password Generator.

Technologies, tools, and stacks used in building the website:

- HTML, CSS, JavaScript
- Utilizing a hosting service such as Beget

2023 – 2023

Corporate Hierarchy Management System

This project involved using WPF and OOP to design a Management System. It efficiently managed an organization's structure, including departments, employees, and salaries. Key features included automatic data population from XML or JSON files, and functionality such as adding, modifying, deleting, and sorting employees and departments, as well as calculating manager payments based on predefined rules, all using OOP principles.

2023 – 2024

Telegram Bot, User Interface

This project involves creating a Telegram Bot with a WPF user interface. The bot receives messages and commands from users, stores various file types, and allows users to view and download files. Key features include responding to commands like /start and saving message history in a JSON file.

2023 – 2024

Daily Planner, Console App

- *This project involves developing a daily planner application in C#, with features like creating, deleting, and editing entries with multiple fields. It also includes loading and saving data from/to a file, importing entries within a date range, and sorting entries by various fields such as name or salary. Tools used include Visual Studio for development and input/output handling for user interaction. Sorting functionality allows users to organize entries by specific fields like name or salary.*
